The Krishnamoorti and Robertson groups at the University of Houston seek qualified candidates to apply for an open postdoctoral researcher position. The project, which is funded by an industrial partner, is focused on addressing fascinating open questions involving the thermodynamics and structure-property relationships in polyolefin and polydiene blends. The project will involve polymer synthesis and characterization, including small-angle scattering techniques.

Candidates with prior experience in polymer synthesis (in particular anionic polymerization) and/or scattering techniques are especially encouraged to apply. A Ph.D. in Chemical Engineering, Chemistry, Materials Science, or a related field is required for this position.

The initial appointment will be for one year, with the potential to continue for a longer duration based on the progress of the project and availability of funding. The project is available to begin immediately.

Please contact Dr. Krishnamoorti and Dr. Robertson by email to express your interest in this position and include a CV or resume.

Dr. Megan L. Robertson  
Assistant Professor  
University of Houston  
Department of Chemical and Biomolecular Engineering  
University of Houston
